What's new?

THE WORLD ECONOMY THIS WEEK – 24th January 2022

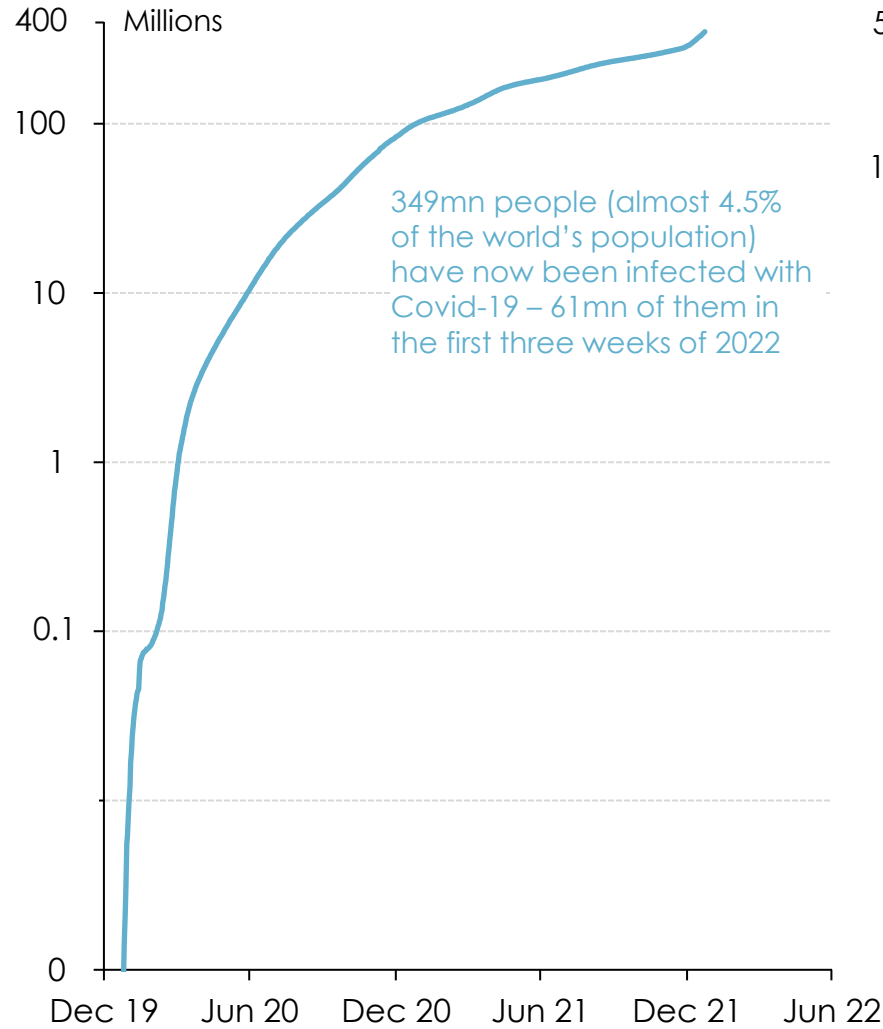

- ❑ The Omicron variant of Covid-19 has continued to spread rapidly throughout much (though not all) of the world – with almost 61mn new infections so far this year including 21mn last week – but so far appears to be resulting in proportionately fewer than earlier variants ([slide 5](#))
- ❑ The weekly tally of new infections in South Africa, where the omicron variant was first detected, is now 86% below its peak in mid-December, offering some basis for hope that the 'omicron wave' may soon peak in other countries ([slide 6](#))
- ❑ However for so long as the progress of vaccinations remains as slow as it has been in developing countries, the risk of the emergence of new variants will remain high ([slide 12](#))
- ❑ Taiwan's export orders, a good leading indicator of world trade volume growth, rose 6.5% in December ([slide 20](#)), including a 14.2% increase in orders for ICT products which may augur well for an easing in the global semiconductor chip shortage ([slide 30](#))
- ❑ China's economy grew by 1.6% in the final quarter of 2021, and by 8.1% in 2021 as a whole – although growth was more reliant on net exports than it had been in any year since 1997, apart from 2020 ([slide 70](#)), and the 'demand side' of the Chinese economy weakened further in December ([slide 72](#)); the People's Bank of China cut rates again last week ([slides 75-76](#))
- ❑ In the US, the Philadelphia Fed's manufacturing business survey suggests that the 'omicron wave' hasn't detracted much from economic activity in January ([slide 41](#)) but also provided further indications that 'upstream' price pressures may be easing ([slide 53](#))
- ❑ The Federal Reserve meets this week, with the outcome to be announced at 6am Thursday morning Australian time – although no policy changes are anticipated from this meeting the Fed is likely to affirm the end of its QE in March with three or four increases in the Fed funds rate to follow over the remainder of this year ([slide 57](#))
- ❑ By contrast, ECB President Lagarde appeared to downplay the prospect of interest rate increases in the euro area any time soon after it completes its asset purchase program in March ([slide 65](#)) and, far less surprisingly, the Bank of Japan kept its policy settings unchanged ([slide 85](#))
- ❑ The prospect of tighter US monetary policy prompted a sharp drop in investor risk appetite last week, with stocks falling ([slide 35](#)), and the dollar, yen and Swiss franc rising against other currencies ([slide 38](#))
- ❑ 'Core' CPI inflation is picking up a little in the more 'advanced' East Asian economies but remains dormant in South-East Asia ([slide 90](#)) – thus far the Bank of Korea has been the only central bank in Asia to raise rates, Indonesia's and Malaysia's central banks left their policy settings on hold last week ([slide 98](#))
- ❑ Elsewhere among 'emerging' market economies, central banks in Ukraine, Paraguay and Sri Lanka raised rates last week ([slides 112](#) and [117](#)), while for the first time in four months, Turkey's central bank didn't cut rates ([slide 118](#))

The virus

The 'omicron' variant of the virus has spread rapidly around the world since late November, but it appears to be less serious than earlier variants

THE WORLD ECONOMY THIS WEEK – 24th January 2022

Cumulative confirmed cases – global total

New confirmed cases – global total

New deaths – global total

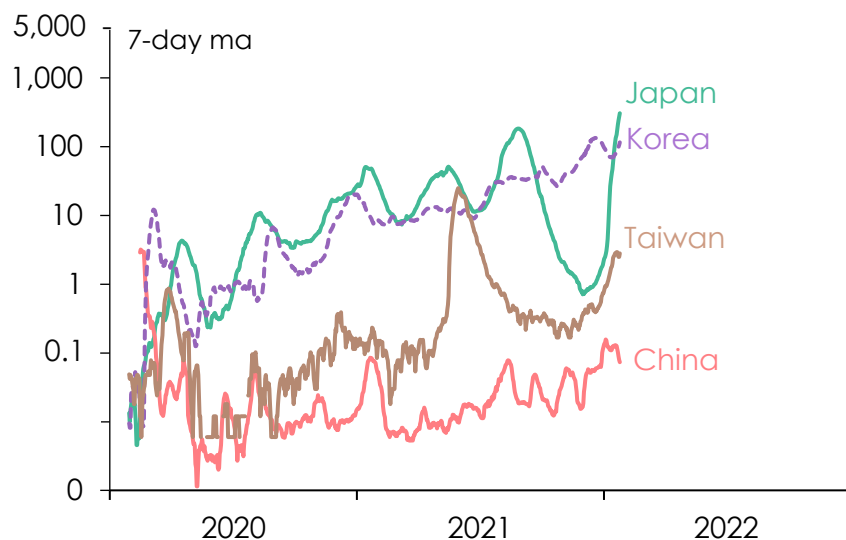

Note: All charts are on logarithmic scales. Data up to 22nd January. Source: University of Oxford, [Our World in Data](#). [Return to "What's New"](#).

The 'omicron variant' has spread rapidly in Europe, North America, Japan, India and Australia – but it appears to have peaked in South Africa

THE WORLD ECONOMY THIS WEEK – 24th January 2022

Daily new cases per million population – major countries and regions

Note: All charts are on logarithmic scales. Data up to 22nd January. Source: University of Oxford, [Our World in Data](#); Corinna. [Return to "What's New"](#).

The highest cumulative infection and death rates (since the onset of the pandemic) have been in Europe, South and North America

THE WORLD ECONOMY THIS WEEK – 24th January 2022

Apparent infection rate

Apparent fatality rate

Apparent death rate

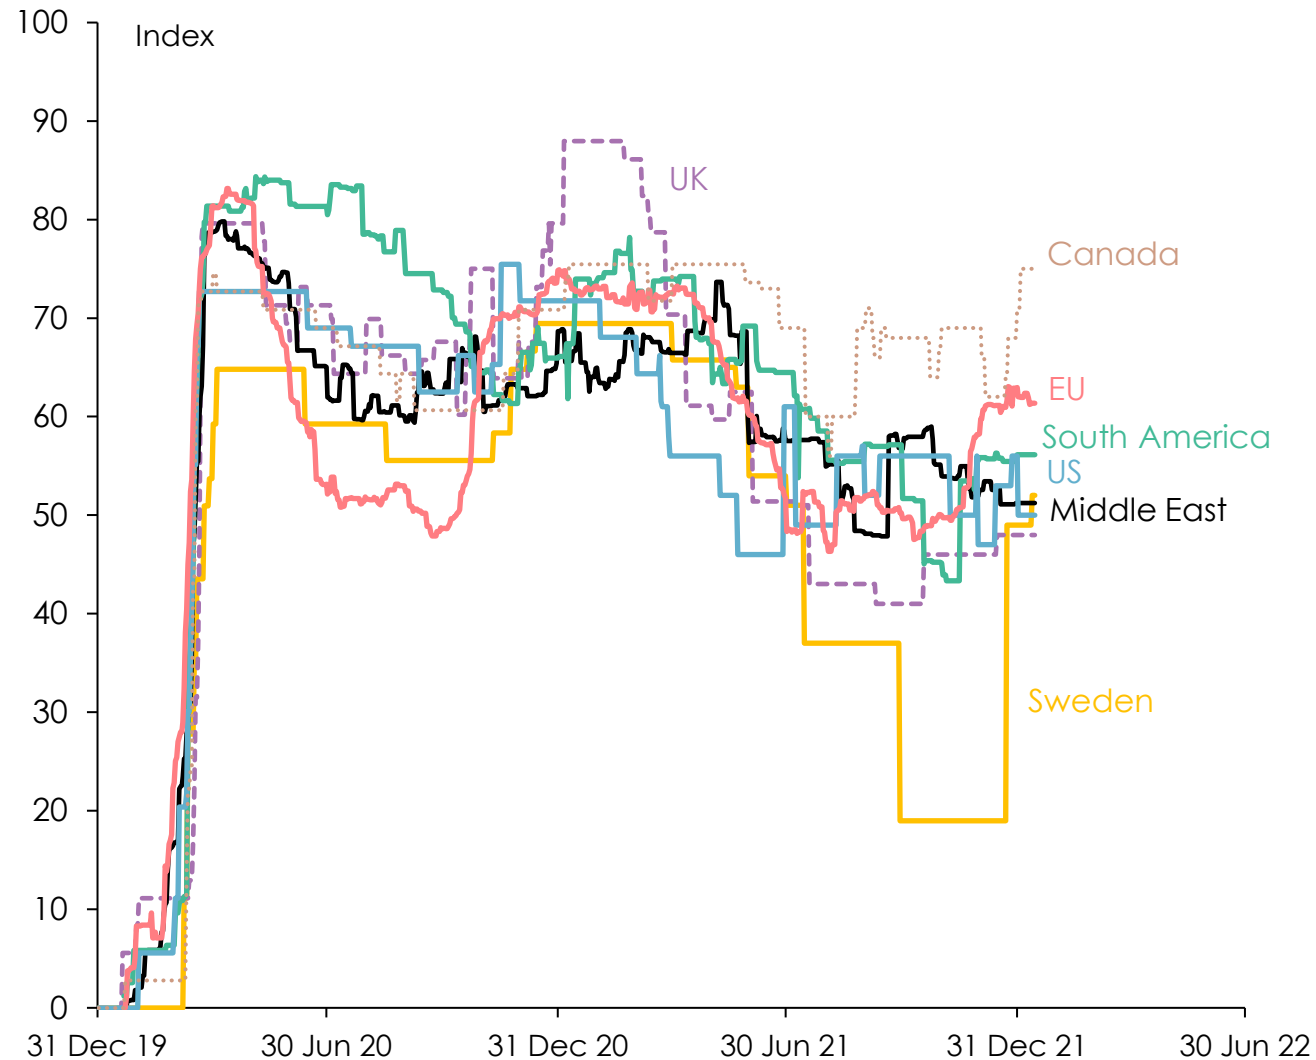

Note: Data up to 22nd January. Sources: University of Oxford, [Our World in Data](#); Corinna. [Return to "What's New"](#).

China continues to maintain very tight restrictions to suppress covid, and some other countries have tightened in response to omicron

THE WORLD ECONOMY THIS WEEK – 24th January 2022

Timing and severity of government restrictions on movement and gathering of people

The Oxford COVID-19 Government Response Tracker collects publicly available information on 11 indicators of government response including school & workplace closures, public events cancellations, restrictions on public gatherings, stay at home requirements, public transport closures, domestic & international travel restrictions, public information campaigns, testing and contact tracing. Source: [Blavatnik School of Government, Oxford University](#). Series for South-East Asia, the EU, South America and the Middle East are population-weighted averages for individual constituent countries. Data up to 22nd January. [Return to "What's New"](#).

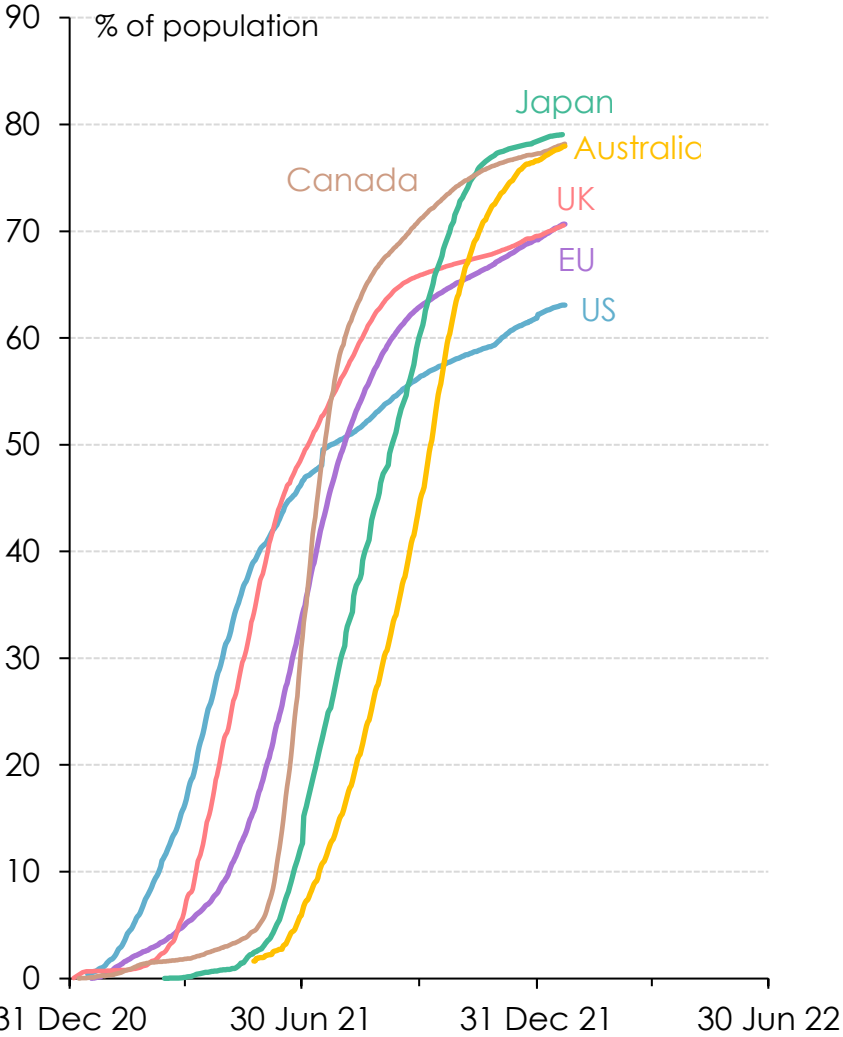

The US lags behind most other 'advanced' economies in fully vaccinating its population while Japan is lagging with 'booster' shots

THE WORLD ECONOMY THIS WEEK – 24th January 2022

Percentage of populations who have had at least one shot

Percentage of populations who have had two shots

Percentage of populations who have had a 'booster' shot

Note: Data up to 22nd January. Source: [Our World in Data](#); [Coronavirus \(COVID-19\) Vaccinations](#). [Return to "What's New"](#).

Vaccine hesitancy is now higher in the US and (surprisingly) in Germany than in other 'advanced' economies – and has fallen sharply in Australia

THE WORLD ECONOMY THIS WEEK – 24th January 2022

Covid-19 vaccine hesitancy, selected 'advanced' economies, December 2021

Percentage of populations unvaccinated and unwilling or uncertain about getting vaccinated

Note: Data for Singapore and Norway are for August; data for Korea and Sweden are for September; data for the US are for October.

Source: Imperial College London and YouGov, [Covid 19 Behaviour Tracker Data Hub](#). [Return to "What's New"](#).

In the US there's a strong correlation between voting patterns and vaccine hesitancy, and between vaccination rates and infection rates

THE WORLD ECONOMY THIS WEEK – 24th January 2022

Vaccination rates vs Trump vote at 2020 elections, by state

Vaccination rates vs infection rates since 30th June, by state

Note: Case data as at 21st January. Sources: [The Cook Political Report](#); [Our World in Data](#); [USA Facts](#); Corinna. [Return to "What's New"](#).

The vaccine roll-out has proceeded much more slowly among low- and lower-middle income countries

THE WORLD ECONOMY THIS WEEK – 24th January 2022

Percentage of populations who have had two vaccinations, by income group

Percentage of populations who have had a 'booster' shot, by income group

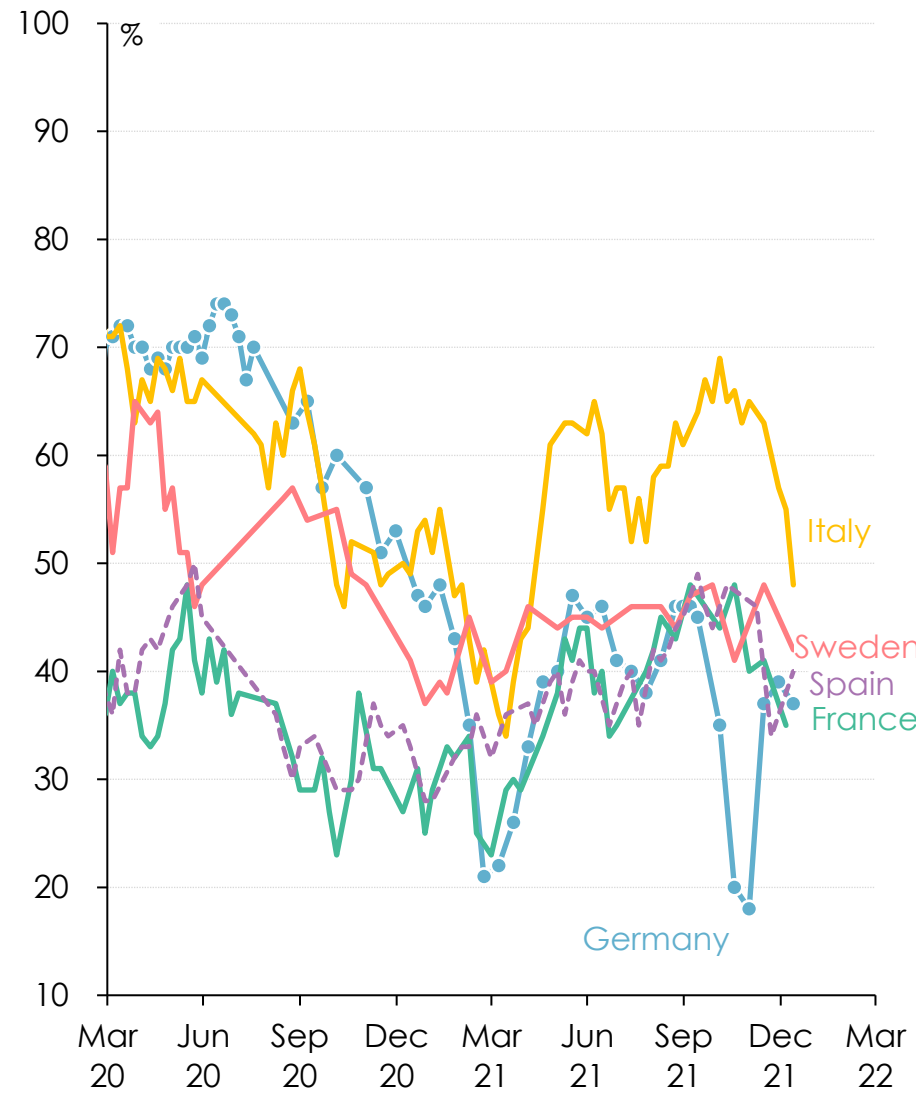

Note: Income categories are as defined by the [World Bank](#): high-income countries are (in 2021) those with a per capita gross national income (GNI) of over US\$12,535; upper-middle income countries are those with per capita GNI between US\$4,046 and \$12,535; lower middle-income countries are those between \$1,036 and \$4,035; and low-income countries are those with per capita GNI of \$1,035 or less. Note that 'upper middle-income countries' includes China, the inclusion of data from which accounts for the large jumps in numbers for this category on 12th August 2021 and 6th January 2022. Source: Our World in Data, [Coronavirus \(COVID-19\) Vaccinations](#). [Return to "What's New"](#).

Voter approval of governments' handling of Covid has improved in Asia but deteriorated in the US, the UK, and most of Europe (except Germany)

THE WORLD ECONOMY THIS WEEK – 24th January 2022

Voter approval of their government's handling of the coronavirus pandemic

Source: YouGov, [Covid-19 tracker: government handling](#). [Return to "What's New"](#).

The world

29 countries (out of 56 for which seasonally-adjusted Q3 GDP estimates are available) have surpassed their pre-pandemic peaks

THE WORLD ECONOMY THIS WEEK – 24th January 2022

Q3 2021 real GDP compared with pre-recession peak

Estimate for China derived from quarterly growth rates published by China NBS; estimates for India and Indonesia are seasonally adjusted by the OECD. Source: National statistical agencies and central banks. [Return to "What's New"](#).

The world economy grew by about 4³/₄% over the year to Q3 – down from 11¹/₄% over the year to Q2 which was flattered by comparison with Q2 2020

THE WORLD ECONOMY THIS WEEK – 24th January 2022

World and OECD area real GDP growth

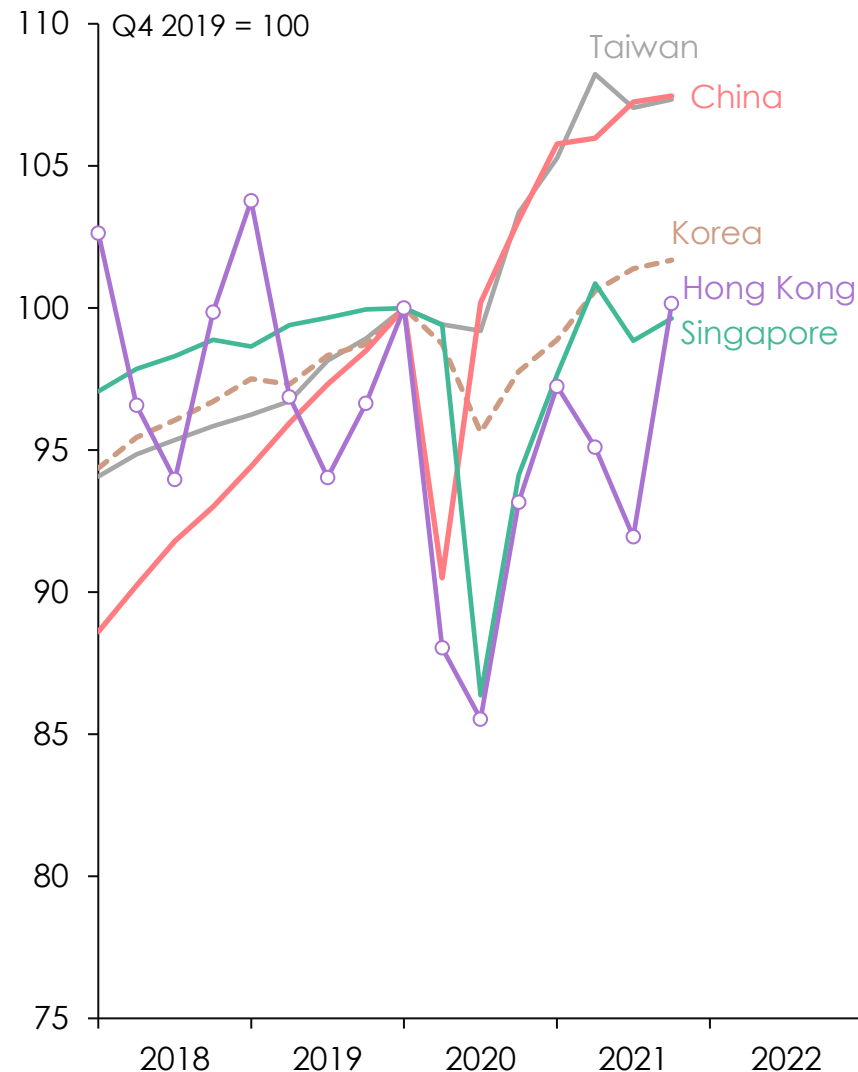

Note: Estimates of global GDP growth compiled by Corinna using data for 100 countries accounting for 94% of 2019 world GDP as measured by the IMF, weighted in accordance with each country's share of global GDP at purchasing power parities in 2019; excludes constituents of the former USSR before 1993, the former Czechoslovakia before 1995, and the former Yugoslavia before 1998. (e) Estimate for Q3 2021 is based on results for about 60 economies. Sources: national statistical agencies and central banks; Eurostat; [OECD](#); IMF; Corinna. [Return to "What's New"](#).

The more 'advanced' Asian economies, Australia's & NZ's and the US's, have recovered more rapidly from last year's recessions than Europe's

THE WORLD ECONOMY THIS WEEK – 24th January 2022

Levels of real GDP indexed to Q4 2019 = 100

Note: All series shown are seasonally adjusted, except for China's which has been constructed using the estimates of quarterly changes in real GDP published by the China National Bureau of Statistics. Sources: National statistical agencies, Eurostat and Bank of Korea; Corinna.

The World Bank this month forecast a significant slowing in global economic growth this year and next as policy stimulus is withdrawn

THE WORLD ECONOMY THIS WEEK – 24th January 2022

India	9.4	8.1	+2.7	-1.8
Brazil	5.0	1.4	-0.2	-0.9
Russia	4.3	2.7	+1.6	-0.7
World	5.6	4.5	-0.1	0.0
OECD area inflation	3.5	4.2	+0.8	+1.8

- The OECD's most recent [Economic Outlook](#), published at the beginning of December, depicts the recovery in the global economy as having “lost momentum and becoming increasingly imbalanced”
 - “persisting supply bottlenecks, rising input costs and the continued effects of the pandemic” are sapping the momentum from the strong rebound after re-opening
 - while “stronger and longer-lasting inflation pressures have emerged in all economies at an unusually early stage of the cycle”, with “labour shortages emerging even though employment and hours worked are yet to recover fully”
- The OECD expects that “supply-side constraints and shortages should wane gradually through 2022-23”
 - with consumer price inflation in OECD countries “projected to peak by the end of 2021” at close to 5%, falling to around 3½% by end-2022 and 3% in 2023
 - while global growth is expected to “moderate over time”, from 5.6% in 2021 to 4½% in 2022 and 3¼% in 2023
 - Covid-19 should become “progressively less of a factor in global economic outcomes over coming years”, unless “new, more dangerous variants of the virus emerge”
- The OECD notes that business investment has been “recovering quickly”, and that “changes in business practices in many firms” triggered by the pandemic may have had a positive net effect on firms’ productivity
- It recommends that central banks in major advanced economies should become “less accommodative”, initially by tapering asset purchases and then by raising policy interest rates – while abrupt withdrawals of fiscal policy support “should be avoided whilst the near-term outlook is still uncertain”

The spread of omicron appears to have prompted a renewed downturn in aviation traffic

THE WORLD ECONOMY THIS WEEK – 24th January 2022

Daily commercial flights worldwide

Daily US TSA 'security' checks

Note: Commercial flights include commercial passenger flights, cargo flights, charter flights, and some business jet flights. Daily flights data are up to 23rd January, and TSA checks up to 22nd January. Thicker coloured lines are 7-day centred moving averages of daily data plotted in thin grey lines. Sources: [Flightradar24.com](https://www.flightradar24.com); [US Transport Safety Administration](https://www.transportation.gov) (at last, something useful produced by aviation 'security'!!!). [Return to "What's New"](#).

December PMIs show continued strength in manufacturing in most major economies but a softening in services activity in 'advanced' economies

THE WORLD ECONOMY THIS WEEK – 24th January 2022

Note: Purchasing Managers' Indexes (PMIs) are derived from surveys of senior executives, who are asked to report whether various dimensions of business activity recorded an increase, decrease or no change compared with the previous month. Latest data are for December. A reading of 50 indicates an overall increase cf. the previous month, and a reading of less than 50 indicates a decrease. See also PMIs for other Asia-Pacific economies on [slide 88](#). Sources: [US Institute for Supply Management](#); [IHS Markit](#); JP Morgan; [Caixin](#); Refinitiv Datastream. [Return to "What's New"](#).

Fiscal policy in almost all major economies is set to tighten significantly in 2022

Producer prices are surging in all major economies: but only in the US and the UK is this feeding into markedly higher core CPI inflation

THE WORLD ECONOMY THIS WEEK – 24th January 2022

United States

Euro area

Canada

Japan

United Kingdom

Sweden

For a more detailed analysis of recent US inflation data see [slides 47-53](#). Sources: [US Bureau of Labor Statistics](#); [Statistics Bureau of Japan](#); [Eurostat](#); [UK Office for National Statistics](#); [Statistics Canada](#); [Statistics Sweden](#). [Return to "What's New"](#).

Except for energy, the global factors which have contributed to 'upstream' price pressures in recent months seem to have peaked (at least for now)

THE WORLD ECONOMY THIS WEEK – 24th January 2022

'Hard' commodity prices

Crude oil price

Shipping freight costs

'Soft' commodity prices

Natural gas prices

Semiconductor chip prices

Note: The IMF commodity price indices were re-based to 2016 = 100 (previously 2005) in October 2021. The European natural gas price is the Netherlands TTF forward day ahead price, up to November; the December and January readings are derived by adjusting the November value for subsequent movements in the UK natural gas price (for which daily data are available). The Asian natural gas price is that of Indonesian LNG in Japan. Sources: [International Monetary Fund](#); [Freightos](#); [Drewry](#); [The Baltic Exchange](#); Refinitiv Datastream.

Export orders for Taiwanese ICT products rebounded strongly in November and December, to new highs, after a sharp fall in October

THE WORLD ECONOMY THIS WEEK – 24th January 2022

Taiwan export orders, by product

Note: Data have been seasonally adjusted by Corinna using Refinitiv Datastream. Latest data are for December 2021.

Source: Taiwan [Ministry of Economic Affairs](#). [Return to "What's New"](#).

- ❑ Taiwan accounts for 63% of the US\$85bn global semi-conductor chip market (followed by Korea 18% and China 6%)
 - one Taiwanese company, Taiwan Semiconductor Manufacturing Co (TSMC) has 54% of the world market, and United Microelectronics Co (UMC) a further 7% (Samsung accounts for Korea's 18%)
- ❑ Semiconductor fabrication plants ("fabs") use very large amounts of water to rinse chips during their manufacture – a typical fab uses 7½-15 million litres of water daily (and water in Taiwan is very cheap, at less than US40¢/t)
- ❑ Taiwan had been experiencing its **worst drought in 56 years**, resulting in rationing of water supplies including to semi-conductor manufacturers
 - although recent heavy rainfalls appear to have broken the drought
- ❑ World-wide semi-conductor production has also been crimped by **plant shutdowns** in Vietnam, Malaysia and the Philippines due to covid-19 outbreaks, and by damage caused by a fire at a Japanese fab earlier this year and a storm at a Texas plant
- ❑ Shortages of semi-conductor chips have caused major headaches for the motor vehicle industry (which uses lots of them)
- ❑ Foreign orders for Taiwanese ICT products rose another 14.2% in December, after an 11.7% increase in November, to exceed their previous peak in February 2021
 - orders for other electronic products were up 6.2% in December, after a 17.7% jump in November, to a new record high

'Core' CPI inflation has picked up a little bit in the more 'advanced' East Asian economies but remains dormant in China and South-East Asia

The so-called 'Great Resignation' may mean the non-accelerating inflation rate of unemployment ('NAIRU') is higher than the Fed thinks

THE WORLD ECONOMY THIS WEEK – 24th January 2022

Job openings

Average hourly earnings

Overall wages growth - monthly

Quit rate

The record high 'quit rate' is the main evidence for the so-called 'Great Resignation' – although the 'record' only goes back to January 2001, and there would seem to be an element of 'catch-up' for this year for the unusually low rate in 2020

Average hourly earnings

Wages growth - quarterly

Note: Measures of average hourly earnings (especially the all-industries measures) and of average compensation per hour are affected by changes in the composition of employment (so for example they rose sharply in Q2 2020 when large numbers of low-paid workers were laid off and fell markedly when they returned to work) whereas the Atlanta Fed 'wage growth tracker' (which tracks the wage growth of individuals) and the wages component of the ECI (which is very similar to the ABS' Wage Price Index) are not. Sources: US Bureau of Labor Statistics, [Job Openings and Labor Turnover Survey](#), [Current Employment Statistics](#), [Employment Cost Trends](#) and [Labor Productivity and Costs](#); Federal Reserve Bank of Atlanta Center for Human Capital Studies, [Wage Growth Tracker](#). [Return to "What's New"](#).

US labour market tightness owes a lot to restrictions on immigration, and to barriers to the return to the labour market of specific groups

THE WORLD ECONOMY THIS WEEK – 24th January 2022

Civilian working age population

Congress seems unlikely to pass anything resembling the Administration's \$1½trn 'Build Back Better' legislation in its present form

THE WORLD ECONOMY THIS WEEK – 24th January 2022

US Federal budget deficit

US gross Federal debt

Fiscal policy impact on GDP

Holdings of US Federal debt

- ❑ The US Federal Government budget deficit narrowed by US\$170bn to just \$21bn in December, the smallest since December 2019, reflecting a surge in personal and payroll tax revenues
- ❑ For the 12 months ended December the budget deficit totalled \$2.58 trn (13.4% of GDP), down from a peak of \$4.1 trn (22.2% of GDP) in the 12 months ended June
- ❑ The market value of gross federal debt outstanding rose \$571bn to \$30.7trn (160.3% of GDP) at the end of December
- ❑ The Fed now holds almost 21% of the total stock of outstanding US Government debt (up from 11% prior to the onset of the pandemic), while the share held by agencies and trusts (such as the Social Security Trust Fund) has fallen to just under 22% (from 26%) and the share held by foreign investors has fallen to 26½% from a peak of 34% in 2014 and 2015
- ❑ The Administration's \$1.5trn "Build Back Better" spending bill seems unlikely to pass Congress in anything resembling its current form

Note: The measure of US gross federal debt is at market value. Sources: US Treasury Department Bureau of the Fiscal Service, [Monthly Treasury Statement](#) and [Treasury Bulletin](#); Federal Reserve Bank of Dallas, [Market Value of US Government Debt](#); Brookings, [Hutchins Center Fiscal Impact Measure](#); Corinna. [Return to "What's New"](#).

Any 'excess demand' resulting from 'excessive' stimulus is more likely to show up in the US current account deficit than in sustained higher inflation

THE WORLD ECONOMY THIS WEEK – 24th January 2022

US current account balance

The US current account has *widened* since the onset of the pandemic-induced recession – and has become larger (as a pc of GDP) than at any time since the financial crisis

Gross saving and investment

Investment *didn't* fall much during the Covid recession as in previous ones – perhaps because it didn't rise as much as usual during the preceding expansion (corporate tax cuts notwithstanding)

Gross saving by sector

The dramatic increase in the budget deficit during and after the Covid recession has been largely (but not totally) offset by an increase in household saving

Note: shaded areas denote recessions as designated by the US [National Bureau of Economic Research](#). Data up to Q3 2021. Sources: US Bureau of Economic Analysis, [International Transactions, International Services, and International Investment Position \(IIP\) Tables](#) and [National Income and Product Accounts](#) Section 5 – Saving and Investment. [Return to "What's New"](#).

The US trade deficit widened sharply again in November, to \$80.2bn, the second-largest ever recorded

THE WORLD ECONOMY THIS WEEK – 24th January 2022

US goods trade balance

US services trade balance

US bilateral goods trade balances

US goods & services trade balance

- The US goods trade deficit widened by US\$15bn to a new record \$98bn in November, reversing the sharp fall in October
 - exports fell 1.8%, after an 11.1% increase in October, with declines in most broad categories except food & beverages, while imports rose 5.1%, the largest monthly increase since March
- The services surplus widened by \$2.1bn to \$18.8bn in November
 - services exports rose 5.0% while services imports rose 2.3%
- November's combined goods and services deficit of \$80.2bn was \$13bn larger than October's, and second only to the record \$81.4bn deficit in September
 - for the first eleven months of 2021 the goods and services deficit was \$785bn, up from \$611bn in the corresponding period of 2020
 - the deficit for 2021 as a whole seems likely to exceed \$800bn, well above the previous record of \$755bn in 2006

Source: US Census Bureau, [Foreign Trade](#); and US Bureau of Economic Analysis, [U.S. International Trade in Goods and Services](#). [Return to "What's New"](#).

The US Federal Reserve is likely to complete its ‘tapering’ of asset purchases by March, and will raise rates three, or possibly four, times this year

THE WORLD ECONOMY THIS WEEK – 24th January 2022

- ❑ At its last meeting for 2021, the US Federal Reserve’s [Federal Open Market Committee](#) decided to accelerate the ‘tapering’ of its asset purchases
 - it will now reduce its purchases of US Treasuries and mortgage-backed securities by US\$20bn and \$10bn a month, respectively, implying that purchases would cease by mid-March, three months sooner than previously foreshadowed
- ❑ Given that the Fed has previously insisted that it wouldn’t start raising rates before ending its ‘QE’, this decision clears the way for interest rates to begin sooner than previously signalled
 - a prospect which was clearly reflected in [Board members’ and regional Presidents’ projections](#) of the ‘appropriate path’ for the Fed funds rate, the median of which for end-2022 was revised up to 0.9% (cf. 0.3% in September), for end-2023 to 1.6% (from 1.0%) and for end-2024 to 2.1% (from 1.8%)
- ❑ In his [post-meeting press conference](#) Fed Chair Jerome Powell noted that inflation had “exceeded 2% for some time”, with price increases having now “spread to a broader range of goods and services”, and that all FOMC members now expected that “labour market conditions consistent with ... maximum employment” (the Fed’s other ‘test’ for beginning to raise interest rates) “will be met next year”
 - the median projection for ‘core’ PCE inflation at end-2022 was raised to 4.4% (from 3.7%) and for end-2022 to 2.6% (from 2.2%), while the median projection for unemployment at the end of this year was lowered to 3.7% (from 4.4%) and for the end of next year to 3.5% (from 3.8%), at which it is then expected to remain through 2023
- ❑ At their Senate confirmation hearings this month both [Powell](#) and incoming Vice-Chair [Lael Brainard](#) nominated “getting inflation back down to 2% while sustaining recovery” as their “most important task”
 - other senior Fed officials, including [St Louis Fed President James Bullard](#), [Chicago Fed President Charles Evans](#) and [Philadelphia Fed President Patrick Harker](#) have all recently foreshadowed support for four increases in the fed funds rate this year, starting in March

Europe

The euro area had a smaller contraction in economic activity in 2020, and has since had a stronger rebound, than the UK

The ECB has foreshadowed an end to its asset purchases by March, but ECB President Lagarde last week downplayed the prospect of rate rises

THE WORLD ECONOMY THIS WEEK – 24th January 2022

- ❑ The [European Central Bank](#) decided to terminate its asset purchase program at the end of March next year, but kept its policy interest rates unchanged, at its 16th December Governing Council meeting
 - the ECB will conduct net asset purchases under its Pandemic Emergency Purchase Program (PEPP) in Q1 next year “at a lower pace than in in the previous quarter” and discontinue them at the end of March (whilst re-investing maturities “until at least the end of 2024”
- ❑ Speaking after the December meeting, ECB President Christine Lagarde twice [indicated](#) that the ECB would “start raising interest rates ... clearly shortly after we finish purchasing assets”
 - although the ECB staff expect growth has moderated during Q4 and that “this slower growth is likely to extend into the early part of next year” (due to the omicron variant), activity is expected to “pick up again strongly in the course of next year”
 - the ECB [staff projections](#) for inflation have been revised “significantly higher” for 2022, to 3.2% (from 1.7% in September), falling to 1.8% (previously 1.5%), with the 2022 forecast for wage inflation also revised up to 3.8% (from 2.9%) – in part reflecting a tighter labour market, with unemployment forecast to fall to 7.3% (previously 7.7%) in 2022 and 6.9% (previously 7.3%) in 2024
- ❑ This past week, however, Mme Lagarde seemed to play down the prospect of any near-term increase in the ECB’s policy interest rate, telling a [French radio program](#) that the ECB did not need “to act as quickly or as ruthlessly” as the US Federal Reserve, and that raising interest rates too soon risked “putting the brakes on growth” at a time when inflation was likely to have fallen anyway, given the 6-9 month lag between changes in interest rates and their impact on economic activity
 - despite which, financial markets are now pricing two 10 basis point increases in the ECB’s refi rate this year, and German 10-year Bund yields turned positive last week for the first time since March 2019 (see [slide 36](#))

The Bank of England raised rates last month for the first time since the onset of Covid-19, while Norges Bank foreshadowed another hike in March

THE WORLD ECONOMY THIS WEEK – 24th January 2022

- ❑ The Bank of England's Monetary Policy Committee raised its Bank Rate by 15 basis points, to 0.25%, at its meeting on 16th December – the first major 'advanced' economy central bank to begin tightening monetary policy
 - the MPC also decided, in effect, to halt its QE program, keeping the target for the total stock of asset purchases at £895bn which is only £2bn above the stock held by the BoE's Asset Purchase Facility as at 15th December
- ❑ The BoE's MPC **judged** that an increase in [the] Bank Rate was “warranted” given that “the labour market is tight and has continued to tighten” (notwithstanding the termination of the UK Government's furlough scheme at the end of September) and that “there are some signs of greater persistence in domestic cost and price pressures”
 - BoE staff expect inflation “to peak at around 6% in April 2022” (with the further increase from 5.1% over the year to November largely the result of hikes in natural gas prices), 1 pc pt higher than forecast in the BoE's November *Inflation Report*
 - while the MPC recognized that the omicron variant could have a dampening impact on economic activity in the short term, it also considered that (in contrast to the initial impact of the virus on inflation), a wide spread of the new variant could result in higher inflation (via supply-chain effects)
- ❑ The MPC also foreshadowed that “some [further] modest tightening of monetary policy is likely to be necessary” over the forecast period “to meet the 2% inflation target sustainably”
- ❑ **Norges Bank** (Norway's central bank) left its policy rate unchanged at 0.50% at its Monetary Policy and Financial Stability Committee meeting last Friday, having raised it 25 bp at the previous meeting in December
 - however Governor Øystein Olsen **indicated** that the policy rate “will most likely be raised in March”, given “continued high employment” and “the risk of a potential rise in domestic price and wage inflation due to capacity constraints and persistent global price pressures”, in order to maintain the objective of “stabilizing inflation around the target” and to counter “a build-up of financial imbalances” (see [slide 67](#))

Return to "What's New".

China's economic policy-makers are beginning to respond to the slowdown in economic growth

THE WORLD ECONOMY THIS WEEK – 24th January 2022

- ❑ China's economy has slowed significantly this year (and would have slowed by more but for the unexpected strength in Chinese exports) – but until very late last year there had been very little indication of any response from Chinese economic policy-makers
- ❑ Last week the PBoC cut the one-year prime loan rate another 10bp, to 3.70%, following the 5bp cut announced the previous week and last month's 50bp reduction in banks' reserve requirement ratios (see [slide 76](#))
 - it also cut the five-year prime loan rate (which is more relevant for property finance) by 5bp to 4.60%, the first reduction since April 2020
 - however movements in interest rates are not the primary mechanism for implementing monetary policy changes in China, and it will be more important to monitor trends in credit provision
- ❑ Further measures are likely to be forthcoming after last month's Central Economic Work Conference (presided over by President Xi Jinping)
 - according to [Chinese press reports](#) the meeting agreed that “economic work should prioritize stability” in the face of “three pressures” facing the Chinese economy, namely, “demand contraction, supply shock and weakening expectations”
 - the readout of the meeting committed to “implement a proactive fiscal policy and a prudent monetary policy”
 - foreshadowed fiscal policy measures included commitments “to implement the new tax reduction and fee reduction policy, strengthen support for small and medium-sized enterprises, individual industrial and commercial households, manufacturing industry, risk mitigation, etc., and carry out infrastructure investment moderately ahead of schedule”
 - “prudent” monetary policy should be “flexible and moderate, and keep liquidity reasonable and abundant”
- ❑ The CEWC also committed to “adhere to the positioning that houses are for living in, not for speculation”
 - under which heading it committed to (inter alia) “speed up the development of long-term rental market, promote the construction of affordable housing” and to “promote the virtuous circle and healthy development of the real estate industry”

The PBoC has begun to ease monetary policy ever-so-slightly

Contributions to change in real GDP

Terms of trade

Note: the 'output gap' is the difference between actual and potential GDP (the volume of goods & services that could be produced if the economy were operating at full capacity); the 'terms of trade' is the ratio of the implicit price deflator of exports of goods & services to that of imports of goods & services – it gives an indication of the income gains or losses arising from changes in the prices of goods and services traded between the US and the rest of the world. Sources: Japan Cabinet Office, [Quarterly Estimates of GDP](#); Bank of Japan, [Output Gap and Potential Growth Rate](#); OECD, [Main Economic Indicators](#), Early Estimates of Quarterly ULC Indicators. The Bank of Japan kept its monetary policy settings on hold at last week's Policy Board meeting, despite slightly raising its inflation forecasts

THE WORLD ECONOMY THIS WEEK – 24th January 2022

- ❑ The BoJ's Policy Board left its policy settings unchanged (as expected) at last Tuesday's Monetary Policy Meeting
 - the interest rate on banks' current balances with the BoJ will remain at -0.1%, and the BoJ will purchase whatever quantity of JGBs is required to keep the 10-year yield at zero, "until the year-on-year rate of increase in the observed CPI (excluding fresh food) exceeds 2% and stays above the target in a stable manner"
- ❑ In its [Monetary Policy Statement](#) issued after the meeting the BoJ forecast that the 'output gap' (between actual and potential GDP) would turn positive "from around the first half of fiscal 2022" as the impact of Covid-19 and supply-side constraints waned, allowing a "virtuous circle from income to spending" to intensify, resulting in the Japanese economy growing "at a pace above its potential rate"
 - Policy Board members revised down their median forecast for economic growth in FY2021 (which ends on 31st March) to 2.8% (from 3.4% in October), but revised the FY2022 forecast up to 3.8% (from 2.9% previously)
- ❑ The BoJ now expects the annual rate of CPI inflation to remain "in positive territory for the time being", as a result of higher energy prices, a "moderate pass-through" of raw material cost increases "on the back of the improvement in the output gap", and dissipation of the effects of last year's cut in mobile phone charges
 - Policy Board members' median forecast for CPI (excluding fresh food) inflation for FY2021 remained unchanged at 0%, but the forecast for FY2022 was revised up slightly to 1.1% (from 0.9%)
- ❑ The BoJ judged that risks to economic activity are "skewed to the downside for the time being" (ie, while Covid-19 remains a threat), but "generally balanced thereafter", while risks to prices were "generally balanced"
- ❑ On 24th December last year, Japan's Cabinet approved a ¥107.6trn budget for FY2022, as part of the 10%-of-GDP stimulus package announced by Prime Minister Kishida in November
 - although the budget assumes smaller borrowings, of ¥37trn (about 7% of GDP), as a result of upward revisions to forecast tax revenues

Other East Asian economies

Most East Asian economies experienced strong rebounds in the first half of 2021 but renewed virus outbreaks caused setbacks in Q3

Bank Indonesia and Bank Negara Malaysia left their monetary policy settings on hold last week, after the hike by the BoK the week before

THE WORLD ECONOMY THIS WEEK – 24th January 2022

- ❑ **Bank Indonesia** left its reverse repo unchanged at 3.50%, its deposit facility rate at 2.75% and its lending facility rate at 4.25%, at last week's Board of Governors meeting
 - in its [post-meeting statement](#) BI emphasized that its monetary policy would be “directed at maintaining stability while supporting national economic recovery efforts”
 - BI expects economic growth of 4.7-5.5% in 2022, up from 3.2-4% in 2021, inflation within the 2-4% target band “in line with still adequate aggregate supply in meeting the increase in aggregate demand”, and a current account deficit of 1.1-1.9% of GDP
 - BI will continue to purchase government bonds in the primary market, until the end of this year, as part of its ‘synergistic policy expansion’ agreement with the Finance Ministry
- ❑ **Bank Negara Malaysia** left its overnight policy interest rate unchanged at 1.75%, at its Monetary Policy Committee meeting on Wednesday
 - the MPC [characterized](#) its stance as “appropriate and accommodative” given its judgement that the “risks to growth remain tilted to the downside” and that “core inflation is expected to be modest, with upside risk constrained by the continued slack in the economy and labour market” despite “risks from prolonged supply-related disruptions”
- ❑ The **Bank of Korea** raised its base rate a further 25bp, to 1.25%, at its first Monetary Policy Board meeting for the year on 14th January, the third such increase since August last year
 - in its [post-meeting statement](#) the Monetary Policy Board reference the continued recovery in the Korean economy despite the resurgence of covid-19, with a “sustained trend of increase” in employment, and forecast that “inflation will continue to run in the 3% range for a considerable period”
 - It foreshadowed a further withdrawal of “monetary policy accommodation” at future meetings, with inflation continuing to “run above the target level for a considerable time” and in order to “reduce the risk of a build-up of financial imbalances”
- ❑ Upcoming Asian central bank meetings are the Bank of Thailand on 9th February, Bank Indonesia again on 10th February, Bangko Sentral ng Pilipinas on 17th February, Bank Negara Malaysia on 3rd March, and Central Bank of China (Taiwan) on 17th March

The Bank of Korea – the only Asian central bank to have tightened monetary policy thus far – raised rates a third time this month

THE WORLD ECONOMY THIS WEEK – 24th January 2022

Note: Neither Hong Kong nor Singapore use a monetary policy indicator interest rate. Hong Kong has a currency board system, so HK interest rates track US rates very closely; the Monetary Authority of Singapore uses the (effective) exchange rate as its principal monetary policy instrument. Data are monthly averages up to 21st January 2022. Sources: national central banks; Refinitiv Datastream. [Return to "What's New"](#).

The rest of the world

Central banks in Ukraine, Paraguay and Sri Lanka raised rates last week – and Turkey’s central bank refrained from cutting them

THE WORLD ECONOMY THIS WEEK – 24th January 2022

- ❑ **National Bank of Ukraine** raised its key policy rate another 100bp to 10% at its Board meeting last Thursday, the sixth increase, for a total of 400bp, since March last year, “in order to improve inflation expectations and ensure steady disinflation towards the target of 5%” (from the peak of 11% in September last year, down to 10% by December)
 - the NBU also **noted** that “the stoking of tensions in the media regarding the possibility of military aggression has decreased the value of Ukrainian assets and created depreciation pressures”, that “prolonged geopolitical tensions could have a very negative impact on the expectations of households, businesses and investors”, and that “if geopolitical risks increase, the NBU will stand ready to tighten its monetary policy”
- ❑ **Banco Central del Paraguay** raised its monetary policy interest rate another 25 bp, to 5.50%, at its Monetary Policy Committee meeting on Friday, the sixth increase, for a total of 475bp, since August last year
 - this was the smallest rate increase since the first one last August (the three previous rate hikes were each of 125bp), which BCP **indicated** was appropriate given that “the downside risks to economic activity” (associated with the onset of drought as well as the omicron variant) “have materialized in recent weeks”
- ❑ The **Central Bank of Sri Lanka** raised its Standing Deposit Facility Rate (SDFR) and the Standing Lending Facility Rate (SLFR) by 50bp, to 5.50% and 6.50% respectively, at its Monetary Board meeting on Thursday, following similar increases in August last year
 - the CBSL’s Monetary Board **stated** that these measures would “curtail the possible build-up of underlying demand pressures in the economy, which would also help ease pressures in the external sector, thus promoting greater macroeconomic stability” (Sri Lankan inflation accelerated from 3.0% in January last year to 14.0% in December, cf. CBSL’s target of “mid single digit levels over the medium term”)
- ❑ **Türkiye Cumhuriyet Merkez Bankası** (Turkey’s central bank) left its 7-day repo rate unchanged at 14% at last Thursday’s Monetary Policy Committee meeting
 - that follows rate cuts totalling 500bp between September and December last year, despite inflation rising from 19.6% to 36.1% and the Turkish lira dropping 37% over that interval ([slide 118](#))
